
MASSACHUSETTS TECHNOLOGY ASSESSMENT COMMITTEE

Amit Kulkarni
Chair MTAC
April 4, 2018

Mr. Steven Graves
Measured Air Performance
President
sgraves@measuredap.com

Dear Mr. Graves,

The Massachusetts Technology Assessment Committee (MTAC) would like to thank you for submitting your technology application for the “SmartStack Technology”.

As you know, the MTAC committee is comprised of engineering and program staff from the eight energy efficiency program administrators in Massachusetts. MTAC works closely with vendors and is charged with rigorously assessing new technologies for potential eligibility in energy efficiency programs operating in the state.

The committee has decided the SmartStack Technology can save energy by reducing air change rates as well as cooling, heating, and ventilation loads in laboratory applications. The committee has referred the technology to the Massachusetts Program Administrators (PAs) for inclusion into their programs.

The committee makes no guarantee or endorsement of the technology. It is the decision of each program administrator to determine whether they will implement a product or technology into their programs.

Please feel free to contact me should you have any further questions.

Thank you for your interest in our programs.

Sincerely,

Amit Kulkarni
